GREEN CITIES WITH SMART CITIZENS

Press  
Release

# The Kuldiga Meeting **3rd press release**

On the 9th and the 10th of May 2023, the Greenvolve-Green Cities with Smart Citizens project partners met in Kuldiga, Latvia, for a transnational project meeting. The event was organised by Kuldīgas Digitālo inovāciju centrus and was attended in person by partners from CAM Consulting, ReadLab and Commune di Mantova and online by partners from Oficina Provincial de la Energía de Granada and Projects in Motion. The partners discussed the following steps of their activities, having decided that the Handbook on Green City Elements, which was developed in the previous months, is ready for release. They are building a database of good practices on public consultation and citizen engagement in green cities and have started the necessary technical steps to create a Greenvolve Platform, which will include both green city solutions and citizen engagement suggestions from countries all around Europe. During this meeting, the partners also got to discover the green solutions implemented in the City of Kuldiga, specifically the green energy electronic bus of the city.

# The Handbook on Green City Elements

## Press Realase

June 2023

The Handbook on Green City Element is the first result of the Greenvolve project. Developed as a solution for incorporating knowledge of green cities, the Handbook elaborates on 69 identified green city solutions, separated into five main categories:

- Climate Change Mitigation
- Climate Change Adaptation
- Circular Economy
- Digitalization
- Energy Transition

## Our Next Steps

The Greenvolve partners have agreed to release the Handbook on Green City Elements, which will be available online on Greenvolve's official website in June 2023, first in English and then in all partner languages Hungarian, Spanish, Italian, Latvian and Greek. The Handbook contains a wide range of green city elements, all structured in the same order: a basic introduction followed by a description/principle of operation, main features and closing up with the most common challenges. The Handbook also contains a trustworthy list of references for further research.

Stay tuned for the upcoming events in each country if you want to be involved in forming a more sustainable and greener city!
